

## TOLKA T-Chat Solution

**Tolka T-Chat Solution** is an intuitive real-time chat solution allowing family and friends to stay in touch at no cost via ADTH advanced set-top boxes and IP network.

The solution is easy to set-up and does not require a computer like other social chat media.

The T-Chat Solution allows users to initiate or receive video calls through their set-top box via LAN, Wi-Fi or WAN. The customized chat interface is clean and simple, it allows users to see and communicate with the other party through the attached web-camera or through the built-in camera on the set-top box with a microphone. The solution allows one-to-one chat where the user can see the caller on the TV screen with a single click allowing the chat function, with the ability of easily switching to receive calls from another caller.

The solution allows users to make calls to any smart mobile devices on any platform. The solution has no country restrictions, no license fees like video chat services used by businesses. Basically it is an in house personal global FREE video chat solution always available at your convenience. Users can easily preset their call information in the system for quick dial-up and access.

Besides the chatting functions, the set-top box can also be used to forward video streams to mobile devices. With the app named TOLKA, users can watch TV when the mobile device and the set-top box are connected in the same LAN.

User demand to stay in touch increases through the Internet-of-Things technology as well as access to high bandwidth. **Tolka T-Chat Solution** enables users to reach out and stay in touch with their loved ones with this easy to use, easy to implement, easy to set up solution centered from your home.
